

Guide to DNA-Genealogy

Genealogy Club of Maris Grove

Dec. 13, 2019

Introduction-DNA What, Why and several Genealogy Basics

What?-DNA (deoxyribonucleic acid) simply stated contains our genes (our genetic makeup)

Why Take a DNA Test?-link to people having same ancestors and give/get family info with them

Why Not Take a DNA Test?-might find out things you don't want to know, can be messing in other people's lives

Basic 1-some records and people's info about ancestors is correct but some may not correct

Basic 2-the more you know about your family the better off you are to find/learn more

Basic 3-having your tree posted on the I'net is helpful; not necessary to post, but much better doing DNA with your tree online
